Aventus Network

The Aventus Network is a Polkadot parachain that enables digital asset issuance, management and ownership.

It brings the **scale of permissioned blockchain** and the **security and interoperability of public blockchains** without the shortcomings of either world.

Why the Aventus Network Needs Validators

The Aventus Network requires validator nodes to validate and process transactions.

Aventus transaction validation works using a Proof-of Stake consensus. This ensures **transparency, security and fairness** across the network through a distributed consensus, where stakers or ‘validators’ are incentivised to validate correct transactions only.

The Aventus Network runs off 10 nodes, each requiring 250,000 AVT. AVT holders can become validators by staking their AVT and associating with it a validator node. In return, they earn their share of transaction fees from that node.

How to Participate

Purchase AVT

On any of the exchanges it is listed on:

Coinbase
Uniswap
Bittrex
Gate.io
Coinbase
P2B
Bitrue

Send AVT

To the Aventus validator registration smart contract

Pick a Bucket

From any of the 10 buckets available to get involved in staking

Receive Fees

Any amount of AVT contributed to a bucket will receive that share of the fees associated with that bucket

Subject to acceptance of the governing agreement and terms and conditions, available at [aventus.io/resources](https://www.ventus.io/resources)

Get Involved

Participate today to begin earning transaction fees from your AVT
